Dry wt% of cannabinoids, if reported, is calculated using the dried weight determined by the moisture content prior to extraction, indicated as "Moisture Content (for dry wt%)." Total THC, Total CBD, and Total CBG is determined by THCA\*0.877+Δ9THC, CBDA\*0.877+CBD, and CBGA\*0.878+CBG. LOQ = Limit of Quantitation. Pass/Fail THC criteria, if listed, is based upon USDA hemp testing guidelines (uncertainty - total THC ≤ 0.3% THC). Action levels vary from state to state. Action levels reported for contaminants are based upon California, Colorado, and/or Michigan state medical high-thc cannabis limits, and are used as suggested action levels by Trichome Analytical for hemp. The results relate only to the samples tested and for the specific tests conducted. This certificate can only be reproduced in full.
